The winner was Samuel Jepson, who was just 17 hundredths of a second slower than his predicted time! Second was Susan Copping, who was 91 hundredths of a second slower than her prediction. Third was Julie Gilbert, who was 14 seconds quicker than predicted.

This was by far the closest result we've had in four years of doing the Lenton Predictor. While the parkrun Virtual Volunteer app used to do the timing records hundredths of seconds in the app, it does not export them in the timing file which is imported into Excel to do the calculations of who is closest (parkrun uses hundredths of seconds to calculate positions, but doesn't publish that info for its own statistics). In previous years, this has been fine - Matthew Atter's win last year was out by whole seconds, but clearly we need to consider whether a more accurate timing method is needed!
